9.1.1 Count of vowels in string

A] Algorithm

Step 1 : Start

Step 2 : Input string a
a = "Hello"

Step 3 : Initialize count = 0

Step 4 : Take first character 'H'
'H' is not a vowel
count = 0

Step 5 : Take next character 'e'
'e' is a vowel
count = 1

Step 6 : Take next character 'l'
'l' is not a vowel
count = 1

Step 7 : Take next character 'l'
'l' is not a vowel
count = 1

Step 8 : Take next character 'o'
'o' is a vowel
count = 2

Step 9 : All characters are checked

Step 10 : Print count
Output = 2

Step 11 : Stop

B] code

```
a=input()

count=0

for ch in a:

        if ch in "AEIOUaeiou":

                count = count + 1

print(count)
```
