7.1.2 Possible Combinations From Three-Digits

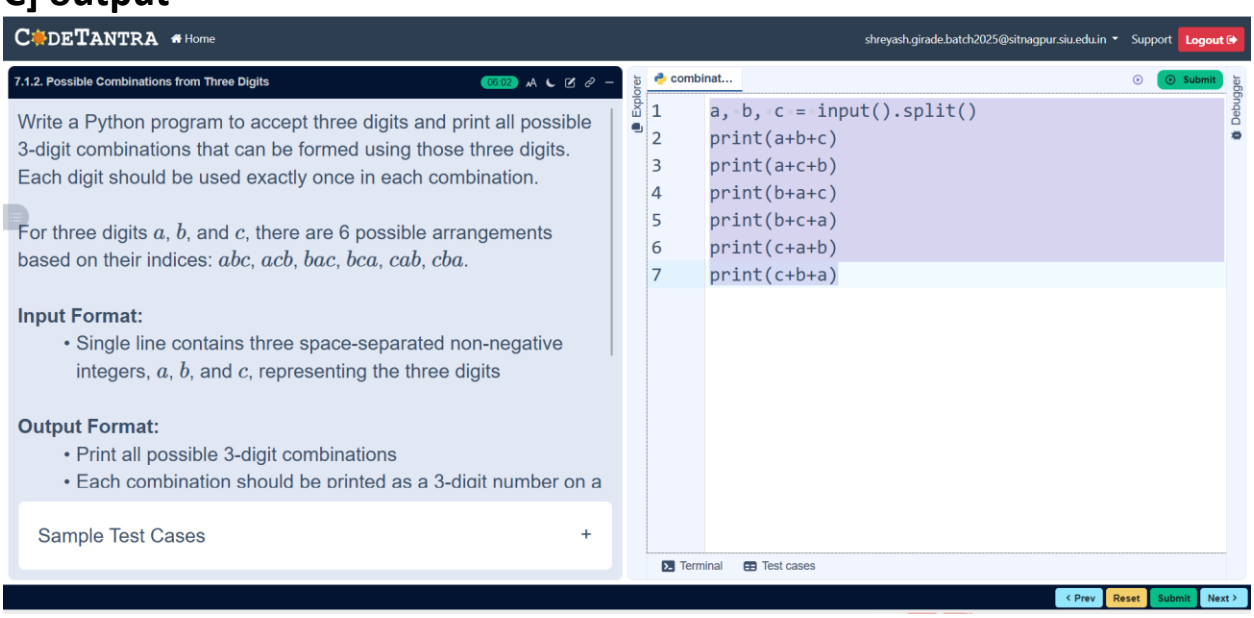
A] Algorithm

Step 1: Start
Step 2: Read three strings a, b, and c from the user using input statement.
Step 3: Store the values in variables a, b, and c.
Step 4: Print the concatenation of a + b + c.
Step 5: Print the concatenation of a + c + b.
Step 6: Print the concatenation of b + a + c.
Step 7: Print the concatenation of b + c + a.
Step 8: Print the concatenation of c + a + b.
Step 9: Print the concatenation of c + b + a.
Step 10: Stop

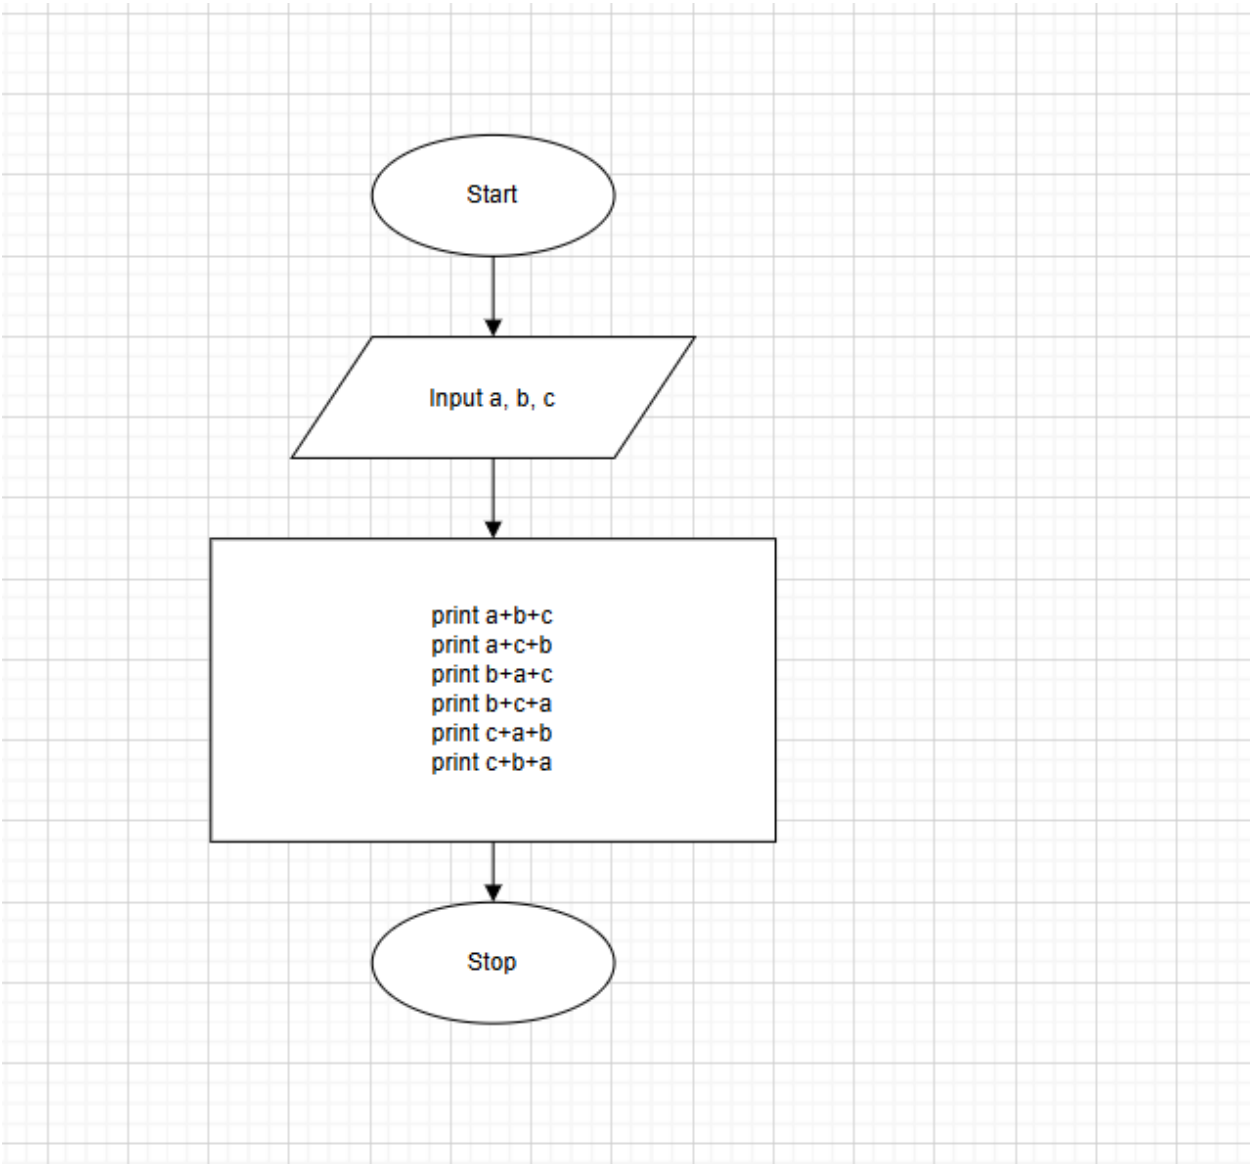
B] code

```
a, b, c = input().split()
print(a+b+c)
print(a+c+b)
print(b+a+c)
print(b+c+a)
print(c+a+b)
print(c+b+a)
```

C] output



D] flowchart



Start
Input a, b, c
print a+b+c
print a+c+b
print b+a+c
print b+c+a
print c+a+b
print c+b+a
Stop
